

Client: London Borough of Newham

Budget: £10,000

Funding Source: Capital Funding

Completion: March 2016

- Features:**
- Galopin Fruit Range
 - Robust design
 - Cast aluminium fixing
 - Inclusive play elements

Project Background:

London Borough of Newham had a small amount of budget left to revitalise an old play area and add more play value to it. The site is located in a densely populated housing estate. A key criteria had to be that the play equipment was robust and able to withstand any form of anti-social behaviour and was relatively maintenance free.

Next Steps:

Jupiter saw this as an opportunity to showcase the robust equipment from Galopin, in particular the newly launched Fruit range which has a quirky design aesthetic with angled posts and unique features while still maintaining the high quality required by the customer and would fit perfectly into urban surrounding.

With cast aluminium clamps, steel posts and a unique design, the multiplay unit and inclusive sensory play wall were welcomed by the council and community. It attracts a wider community making it a family-friendly zone that offers parents a new location to take their children to play and it brightens up the community with the bold colour choices.

Outcome:

This project shows that clients do not need a large budget to create a beautifully sculptured and loved play space that can be enjoyed by people of all ages.

"Steve understood our needs and provided us with robust play equipment that brightened up the community play space AND could stand the test of time. The installation was a quick turnaround, and although I wasn't available to make it onto site during this phase, Steve communicated well with myself throughout the whole process - which made life a lot easier. I cannot believe the quality of this product, I am very impressed, and the members of the public love their new Galopin equipment."

Debby Mehegan, Parks Asset Manager at London Borough of Newham
