The IP8012 Wheelspin is the most inclusive piece of equipment on the market it is flush to the ground so that wheelchairs users can access with ease, whilst its textured platform is slip resistant and allows for a visually impaired user to be able to detect a change of surface.

The large surface area means children can play in groups with ample room for two regular wheelchairs or one larger, power assisted chair.

The carefully thought out design not only provides standing room but includes seating with back support, ensuring plenty of room for a parent or carer to sit with their child or those who require additional postural support.

Lastly, there is an inspection hatch located underneath the seat which can be removed to inspect the bearing and grease if its required. This avoids having to take the product completely apart for maintenance.

Scale: 1:50
