play spaces that create a sense of

Wonder

Family Run Business

Welcome to our world of wonder, play, creation and fun. When you choose to work with Jupiter Play you are choosing to work with a family and a passionate team who have been creating and collaborating on amazing play spaces for over twenty years.

Michael and Catherine, the owners and directors of Jupiter Play, as well as their children, have always been integral to all operations of this independent business. Pioneers of sourcing the best suppliers and installers globally, this allows us to bring in a diverse range of niche skillsets all under the Jupiter umbrella. This international network enables us to provide a culture of growth and innovation for our team. For our clients, you will know that you are working with a team with a passion for what they do - who strive to push the limits at every opportunity without being restricted to a brand, manufacturer or delivering to shareholder expectations.

Join us on this adventure through play, sport and creativity to experience one of the most caring and personalised services in the industry.

Why Work with Jupiter Play?

What is the most important factor in your decision to work with a play and sports equipment supplier and designer?

We believe that the most valuable service we can provide is building great relationships, listening to our clients' needs and provide expert advice, products and creativity that are proven to leave a lasting legacy.

Our Mission to You

Designing play spaces that create a sense of wonder, that inspire children, their parents and communities to be active and engaged in their outdoor spaces.

Our products and designs have featured in many award-winning sites. We strengthen our creativity with robust quality and vetting systems.

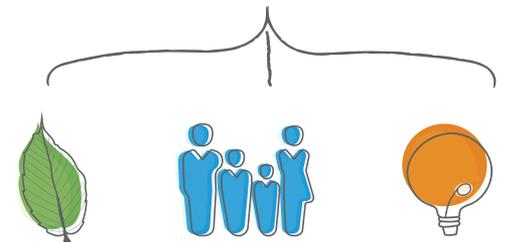

The Benefits To You

People are at the heart of what we do and this is represented in our family centred business that supports evolution, growth and positive impact on our communities, instead of market share and dividends. This is represented in our three pillars of Jupiter Play;

1. Independent family run business & supply chain
2. Quality and sustainability
3. Centre of learning - Innovation Hub

These pillars make us unique in our industry in that it is centred around the core beliefs of our family founders who recognise the only way to successfully deliver play projects is by always moving forward, championing quality, minimising our impact on the environment and creating a culture of learning and development that is shared with our clients.

The Design Approach

It is our goal that each and every one of our play spaces excites and inspires not only children but also their families and the wider community. We recognise how a well-designed space that sparks adventure but can also be a beautiful feature of the community can evoke a sense of pride and belonging.

When a play space is delivered with thought and care; balancing play value, community values, an engaging aesthetic, consideration to ongoing revenue costs and sustainability then it ensures a play space's longevity. From concept development to working alongside in-house design teams we can deliver a full design solution to individual products.

When choosing Jupiter Play you will be;

- Working with talented designers, whether that is with Jupiter Play's own design team in the UK or our extended international supplier network
- Have the freedom to work with a range of brands that fit the brief and character of the site
- Engaging in a collaborative approach to the project. This means a process of open communication, providing visuals, drawings and concept briefs to support the idea development at each stage.

World of Innovation

As an entirely independent family run business, we have hand-picked a range of brands to represent here in the UK, all of whom must have a synergy with our three uniques and core values.

FHS Holztechnik: Our longest-serving collaborator, established in 1984, are synonymous with quality material, product and design. FHS provides the most beautifully crafted Robinia timber products that have proven to withstand all environments and conditions.

Yalp Interactive Play: The most exciting innovation in the play industry yet! Yalp aims to make outdoor play as engaging as gaming and the gaming culture, closing the gap between these two worlds. A Huge success globally Jupiter Play have delivered over 40 interactive projects in the UK.

Galopin: Established over 30 years ago Galopin offer an extensive collection of outdoor play equipment that provide a unique aesthetic for urban environments. From giant space nets to their incredible bespoke designs we are able to offer clients a clean modern aesthetic in design.

Inclusive Play: The younger sibling of Jupiter Play established in 2011, Inclusive Play is now an independent brand with a worldwide presence. Focused on providing better inclusive play experiences and opportunities.

Linie M: Jupiter Play are delighted to introduce the highest quality stainless steel brand to the portfolio in 2019. Beautifully crafted and designed feature products fit for any landscape.

Norwell Outdoor Fitness: Norwell was founded in 2007 and have since created a vast range of outdoor fitness equipment with a beautiful minimalistic Danish aesthetic, making it easy to place in any environment.

Innovation Hub - a centre for learning and resource

The world around us is quickly evolving and changing. For us to stay in tune and relevant we have the innovation hub at the heart of our operation. This impacts greatly on the design, consultancy and delivery of our play spaces but is mostly focused on how we can make a greater contribution to local communities who our play spaces serve. The Jupiter Play team are the driving force behind the innovation hub, their passion to learn and develop have enabled the company to lead the way in the industry particularly in;

A Design-Led approach is the single most important drive for Jupiter Play. The design team comprises of a team of experts in; bespoke design, landscape architecture and urban design.

The team work within the international network to keep up with the latest developments, most notably with artisans of bespoke design in Germany and Landscape Architects globally.

These partnerships ensure you, our client will always receive a highly skilled and knowledgeable design package.

Inclusive design is the oldest strand of the innovation hub. Did you know that the brand Inclusive Play was set up within Jupiter Play in response to the poor amount of attention and understanding on inclusive play in the play industry?

The founder of the PiPA toolkit is also a senior member of the team, with over a decade of experience collaborating with SEN schools, short breaks teams and families to keep driving better inclusive design.

Jupiter Play's bespoke design capabilities also enables us to create inclusive products that enable all children to play together, whatever their ability.

Active Landscape Research is our most recent addition to the innovation hub. So concerned are we, with the health crisis in the UK and the low activity levels that are affecting the health and well-being of our future generations, we have taken a step to understand how our role as designers for children at play can help to change this.

Having learned the importance of fundamental movement skills we are now working in collaboration with Coventry University on a piece of research that will be one of the most unique studies undertaken within the play and sport sector.

Quality & Sustainability

Quality and sustainability should be viewed as equals - utilising quality build materials ensures the longevity of equipment and less requirement for replacing parts and product, therefore minimising our impact on the environment. We also weigh this up against play value, products can be made to last forever, but are a waste of resource and precious budgets if they aren't being played on and loved!

Each year we undertake a site life-cycle costing analysis which allows us to report on spares spend, 90% of our mid to large scale projects have an annual revenue spend of less than £200. This is an important part of our environmental impact strategy, where we review how to reduce our operational impact and our carbon footprint.

Quality

We are one of the few Robinia specialists on the market who have been delivering Robinia (and other timber) play spaces in the UK for over a decade, all of which remain in place unscathed by deteriorating wood and fixings.

FHS for example who are the creators of our natural timber range only work with the highest quality of raw materials. Each product is made by experienced carpenters who craft the incredible, sustainably sourced, quality products that is known to our clients here in the UK today. Each product is fully assembled in factory conditions, under quality management systems, and each part is made to measure with smooth joins and stainless steel fixings. One of the many benefits of working with world-class German engineering.

Sustainability

Minimise Plastics in Playgrounds

Our products are made from non-toxic materials and we work with a supply chain that continuously strives to reduce their impact on the environment, represented through ISO14001 and other world-wide initiatives. Our biggest push is for zero plastics in our play equipment, which we have now achieved with our main suppliers FHS.

We are acutely aware of the restraints surfacing has on being able to achieve a completely zero plastics playground and we are working on finding alternative solutions that offer durability with minimal maintenance for our industry.

Sustainable Shoots

Sustainable Shoots is our contribution to supporting the worldwide focus to plant more trees and protect our environment for our future generations. With every large scale project we deliver, we offer a tree to be planted as part of the scheme or to be donated to a local community group or school.

Kilburn Grange, London Borough of Camden

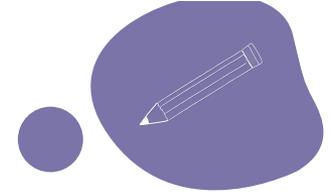

Bespoke

Some projects call for a uniqueness that just cannot be achieved from an off-the-shelf product. Whether this is creating the 'Willy-Wonka' World of Ice-cream for the Cheshire Ice Cream Farm, an 18m high Giraffe or maybe something more subtle such as sculpted posts or carvings, the creative prowess of Jupiter Play and our partners at FHS and Galopin will enable you to deliver anything your imagination can dream of!

We can work at any stage of the RIBA process, whether that is to come up with the concept or work with our clients to deliver their concept and deliver the product through to complete installation. Our clients are guaranteed the same level of quality and high standards of workmanship as the catalogue products and our bespoke products are all covered under our usual warranties. Plus, we do not compromise on safety, all products are built and risk assessed to EN1176 standards while still offering incredible play value.

"The project brief that we gave Jupiter was, I'm sure, one of the most difficult that they have come across, but their designs were excellent & delivery was equally impressive. It will be a pleasure to work with Jupiter again in future."

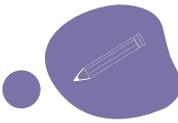

- John Parrot, Play Officer, Harborough District Council Community Services

Bespoke Products

Bespoke Design Process

*Equivalent to RIBA stages

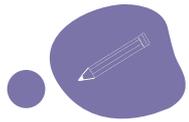

A photograph of a wooden playground structure. In the foreground, a wooden plank bridge with rope railings leads towards a larger wooden structure. This structure features a slide and a platform with a railing. The playground is surrounded by lush green pine trees under a blue sky with scattered white clouds. A quote box is overlaid on the left side of the image.

“

I am particularly proud that this playground has something to offer young people of all abilities. I believe Watford must be one of the best places in the country for play.

Councillor Karen Collet,
Watford Borough Council

Harwoods Adventurous Playground, Watford

This is one of Jupiter Play's most exciting projects as it highlights a unique collaboration with Southern Green Landscape Architects, Watford Borough Council and installers SLC to create an inclusive natural playspace, that enables children of all ages and abilities to play at height and enjoy a beautiful natural landscape in a densely populated urban environment.

The bespoke unit showcases an organic theme in attempts to compliment the natural shape of the timber and existing landscape. Southern Green Landscape and Jupiter designers maintained this natural flow by avoiding the use of large man-made structures.

Juliana School, Netherlands

Interactive

Why use technology in play?

Lead product designer at Yalp, Rob Tuitert, wanted to explore why the gaming culture was so popular. If outdoor play was as addictive and engaging as computer games then wouldn't we all support this movement? Yalp now has a collection of 5 products that engage different age groups and provide a unique solution to sedentary behaviour and community disconnect.

Yalp interactives are also the only real solution for the 12+ age group when playgrounds in the traditional sense start to lose their appeal. The design team have taken time to understand youth culture, music, sports and activities that are synonymous with this sub-culture.

Internet Connectivity

All of the Yalp products connect with the internet, to provide owners with control over their play-sets, with the ability to control volume, playable hours and the opportunity to download new games and keep the interactive play product fresh and new over the years.

The best bit is the access to real-time data on usage stats and game popularity. It is the only outdoor play product that enables you to see how many hours are being played and provide a real understanding of the community and return on investment.

Interactive Range

Toro Sports Court

The games available on the Toro are both physically and mentally challenging where complete awareness of the pitch and the goals are required to beat the game. Unlike a traditional MUGA the range of games and the appeal is far more diverse.

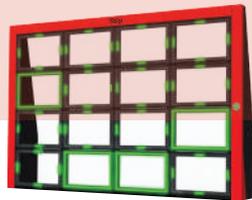

The Toro is great for tactical and physical training as well as playing for fun. The size of the Toro allows for larger groups or teams to play as well as individuals.

Sutu Sports Wall

The Sutu interactive wall is THE new way to play ball games with a wide appeal for all ages and sexes. Comprising 16 interactive panels made of a strong polycarbonate (used by police riot shields) each panel lights up in line with the game being played.

The Sutu challenges both beginners and professional footballers alike, focusing on aim, speed or agility. The Sutu has already proven to be popular with football clubs, the FA and Local authorities in the UK.

Sona Play Arch

The Sona is a platform for music and sound-based play that is inclusive for all ages and abilities.

With one push of a button, a world of dance, imagination, coordination, mathematics and spelling become available. All of the games operate through a motion-sensitive camera within the roof of the arch which tracks each player. A great way to get communities more active from a very early age!

Fono DJ Booth

Young people often feel the most neglected and ignored in open space design, but the Fono taps into one of the strongest elements of youth culture; music and dance!

The Fono is essentially a mixing desk in the form of a shelter/dance and seating area. Young people can use their own music on their smart phones to simply play back, or for any discerning DJ can take to the decks to mix, scratch, record, loop and more to create their own space for hanging out and socialising.

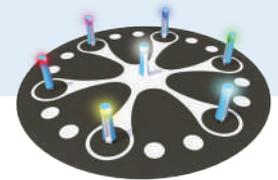

reddot design award

Memo Activity Zone

The Memo was designed in recognition that children learn best when they are physically active. Hence the name – Memory Movement; MeMo

The seven interactive posts are home to a series of games designed around STEMs, providing an outdoor classroom for maths, language, memory, PE and more. Children can work in teams or individually and learning becomes a fun playful experience in the great outdoors!

Interactive Products

A large orange archway stands over a colorful mat on a grassy field. Five children are playing on the mat, which features a yellow star and various colored shapes. One child is wearing a red cape. In the background, there are trees, a fence, and residential buildings under a clear blue sky.

“

We regularly check how much the products are being used and are always amazed with the increase in popularity. It's really helping bring the community together and outdoors.

Aaron Niblet, Parks Officer
Hertsmere Borough Council

Meadow Park, Hertsmere Borough Council

Hertsmere Borough Council wanted to find a way to get young children more active in their community. The borough has one of the highest statistics for pre-school obesity in the country, and they wanted to find a way to tackle this matter.

The Sona seemed like a great solution. It is playful, intuitive, and provides an opportunity to play like you're at the arcade. It has a big game library and captures dance, learning, and imaginative play in one space. The location is on route to school, providing students a little nudge into being more active before and after class.

Thrilled with the results Hertsmere went on to commission the full range of Yalp interactive play products and are now huge advocates of the power of interactive play. Jupiter Play and Hertsmere BC continue to work in partnership to encourage other local authorities to explore other options outside of MUGAs and Gyms that engage and activate communities.

The Crannog, Drumpellier Country Park

Inclusive

1 in 20 children under the age of 16 live with a disability. Playspace specialists like us must understand this, so we can design products and spaces that enable children and their families regardless of their ability, to be able to experience the same sense of wonder in their play spaces as everyone else.

92% of parents surveyed (Equality and Human Rights Commission Survey) felt that their child did not have the same opportunities to play as their non-disabled peers; 81% of parents also reported difficulties in accessing mainstream play groups and local play opportunities.

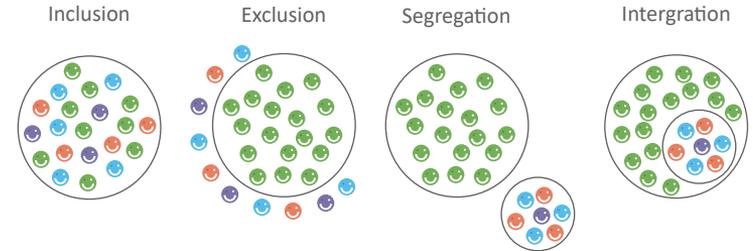

Jupiter Play has always been at the forefront of inclusive design as we understand that inclusivity in terms of special needs and disability can impact children in many ways, from physical ability to more complex learning or sensory needs. We have made it our mission to search for the best products that enable us to create the most enriched playful experiences for all children, which is why in 2006 we established Inclusive Play Ltd, now an independent business trading in its own right.

Our partnerships with FHS and Galopin enable us to create bespoke pieces that offer true inclusion. One of our main mantras for inclusive play is enabling every child to play at height and creating access points at a variety of levels, often impossible to achieve with off the shelf products. We have successfully delivered a range of schemes working in this collaborative way with our partners.

Offering True Inclusion

True inclusion is delivering a space without barriers and offering a choice of play experiences for children of all abilities. So often we see good intent (segregation and integration) which results in exclusion as shown here in this diagram on the right.

The most effective way of creating variety and depth of play that appeals to all children is to deliver a play space that offers a full sensory diet. The sensory wheel pictured below shows six of the seven senses (taste is a tricky sense to deliver in a playground!) which we always strive to deliver in our playground designs. A sensory diet is important for every child and in fact every human being, not unlike a muscle, the more you use it the more effective it is.

Some children don't get to 'practice' using their senses, quite often the vestibular and proprioception senses are engaged less for children with more physical disabilities and equally some children on the autism spectrum require higher engagement in these senses, but if play equipment isn't designed to be accessible then even the playground will not allow them to engage these senses.

The sensory wheel is a great guide for delivering inclusive play, coupled with the use of PiPA, (Plan Inclusive Play Areas) toolkit and Jupiter Play have specialists within this field to help you deliver your inclusive playground.

“

Every child should have access to play and this is a really welcome addition to our portfolio. Even before the official opening, we had at least 300 visitors in one day!

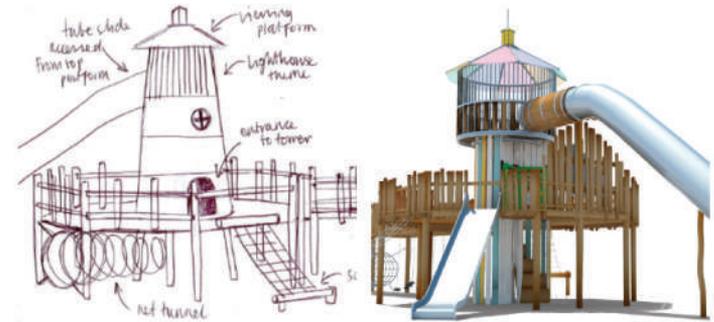

Ian Taylor
Head of Public Realm, Tendrin District Council

Bath House Meadows, Tendring District Council

Walton-on-The-Naze is the home of the second-longest pier in the UK with a huge village of beach huts in pastel colours. The concept for the project celebrates these characteristics, creating a space full of play value, local connection and opportunity for children of all ages and abilities to enjoy play. Essex County Council short breaks and Tendring Council both funded this innovative project to open up better quality play provision to serve families with disabilities across Essex.

This play area is PiPA certified and mapped so it is easy to find for families with children with special needs.

Houlton Fields Destination Play Area, Rugby

Nature

In our increasingly urbanised environments, finding pockets of natural play is more valuable than ever. Richard Louv coined the phrase 'Nature Deficit Disorder' and believes that 'children now wander less, discover less and are losing some important connections to nature and place'. Ultimately, children – and therefore everyone – are becoming increasingly disconnected from nature which impacts both the environment's and our own wellbeing.

Preserving our natural world is the single most important thing we need to be concerned with for our future generations and our planet. The opportunity to green an area and create playful interventions that create deep meaningful connections with children and place is our way of highlighting the wonder and importance of the natural world.

We are home to the industry's finest quality of Robinia, crafting our products with long-rotted timbers and skilled carpentry. The result is a timber that will last at least 15 years. We are proud to have sites with as little as £60 spent on replacements in over a decade!

"The theming and bespoke nature of the playground is important. It'll make a big difference to our play area - now you walk in and see the playground, it really stands out and draws people in. Once the meadows grow it'll look great in context to its surroundings."

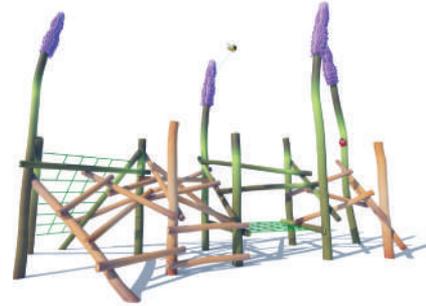

**- Kelly Eaton, Public Realm Projects and Policy Manager,
London Borough of Brent Council**

Nature Inspired Designs

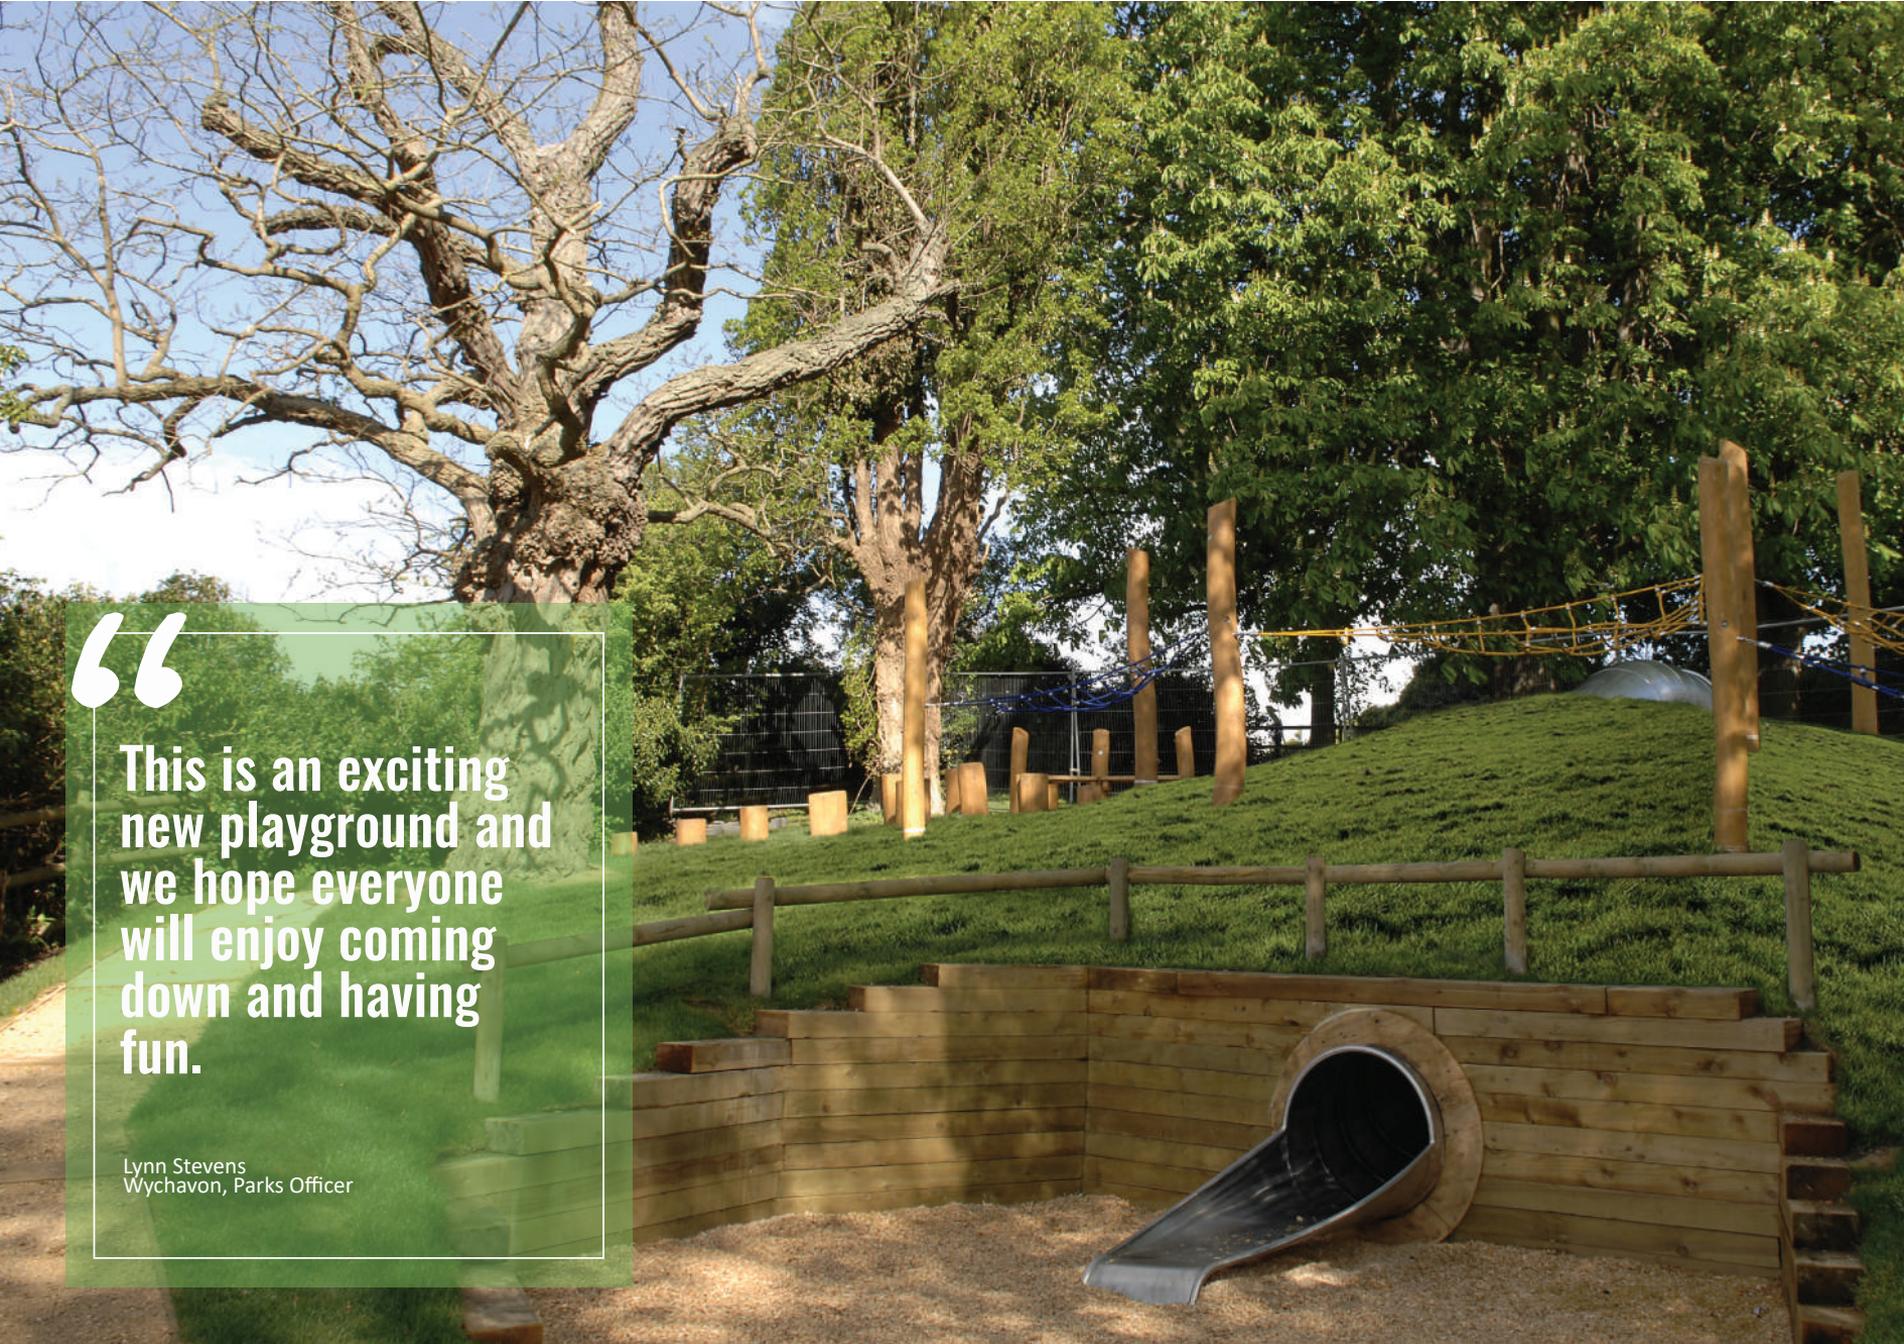

The natural world stimulates a constant sense of awe, wonder and beauty that we aim to capture in our natural play space design. From the tiniest spiral of a snail shell to huge, sweeping mountainscapes – we take inspiration from it all.

Whether you are looking to create a pocket park or a large destination space for play we have a wealth of experience available to you. Our design team is headed up by a Landscape Architect which enables us to balance considered landscape design, a strong aesthetic and varied play value, all with the aim of allowing children to play freely and creatively in the natural world.

Nature Products

“

This is an exciting new playground and we hope everyone will enjoy coming down and having fun.

Lynn Stevens
Wychavon, Parks Officer

Abbey Park, Wychavon DC, Evesham

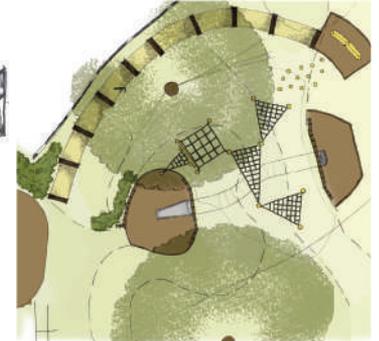

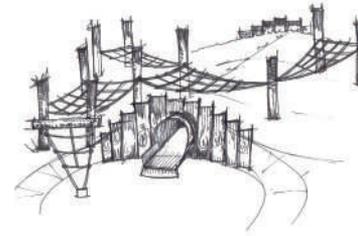

An example of great landscape design; a play space and environment working together to create a wonderfully unique experience with a real sense of place. Abbey Park is close to a Scheduled Ancient Monument site and the landscape around it is therefore protected and requires sensitivity in design.

The client saw the opportunity to create a playful landscape with an embankment slide on a south-facing slope; a challenge to meet the EN1176 standards as south-facing slides do not comply with good design practice.

However so often within restrictive designs, a more creative solution is found and that is how the buried slide came to be! We maximised play value by creating a playful route above, offering a range of routes and challenges for all children to take on at their own stage of development.

This project was delivered in 2010 and is still enjoyed to today, over a decade on with minimal upkeep and care.

The Wave, Vigo - Spain

Urban

Around 55% of the world's population is thought to be living in an urban area or city, and this number is projected to increase to 68% over the coming decades. Almost two-thirds of the urban area that will exist by the year 2030 is yet to be built, so it is vital that we take the opportunity to create and maintain healthy and sustainable urban environments.

The urban landscape is unique and challenging; high-density housing and living space where all cultures, ages and backgrounds collide. Where nature provides a setting for natural materials the urban realm requires more imagination to use hardy materials without losing the high-level design aesthetic.

Playspaces do not have to have the identikit feel to them or subscribe to the KFC (Kit Fence Carpet) approach to play, regardless if there is a concern around durability and maintenance. Play should inspire regardless of the challenges a location may create.

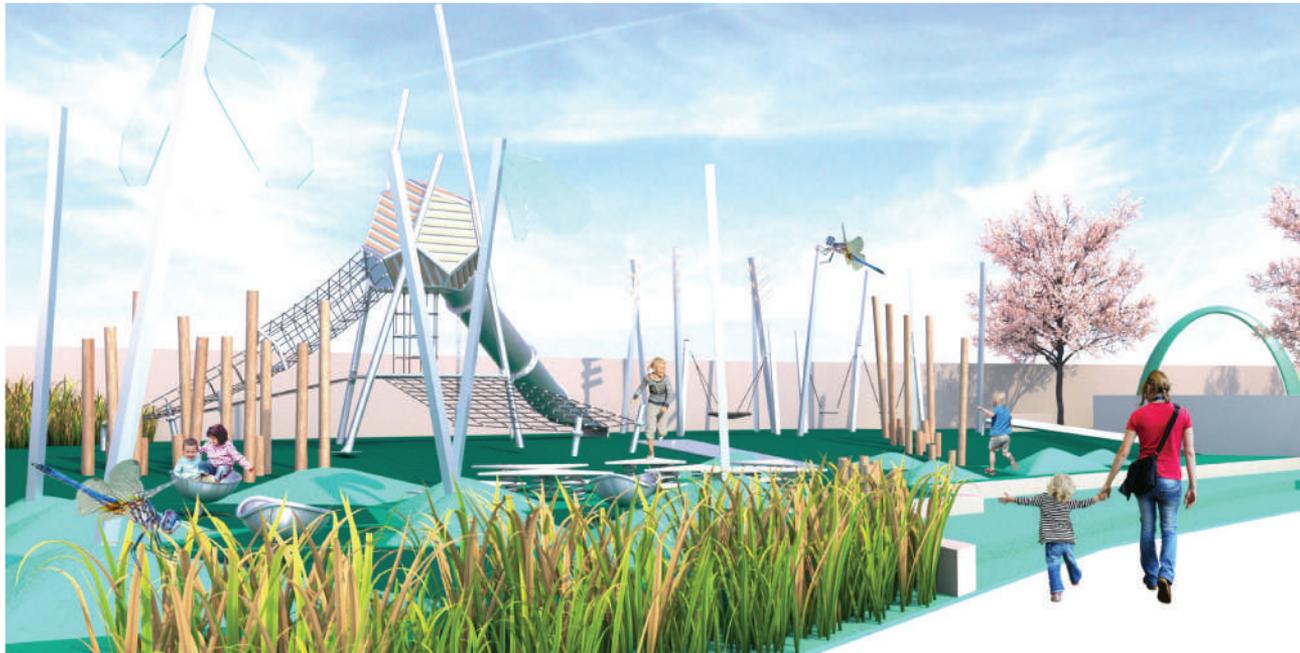

Our partnerships with the high-quality stainless steel providers Linie M to the wide range of steel play available from Galopin and FHS enable us to continue to create unique spaces that still provides a sense of place in the urban realm.

Urban Inspired Designs

We believe in designing urban spaces with children as the focus. Creating high quality, playable spaces within our urban communities is essential to the welfare of the next generation.

The urban landscape offers a wealth of inspiration in terms of form, colour and texture that we aim to bring through to the design detail. Our aim is to design exciting but durable play spaces that will encourage children living in urban environments to spend more time outside.

Urban Products

“

The result is an elegant, minimalistic and very entertaining design: a safe but still highly challenging playground for the little ones.

Galopin Playgrounds

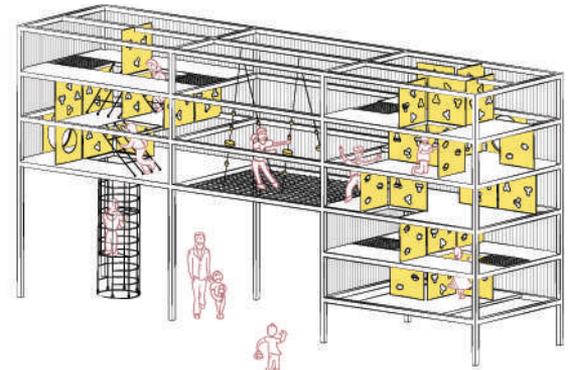

Thinking Outside The Box

Passionate about challenging the stereotypical ideals of urban play, we present to you this unique project for a dense housing area in northern Spain. Urban design doesn't have to subscribe to a formulaic approach of multiplay, swings and roundabouts and although this serves many communities well, this showcases a different approach to play in a small urban space.

The central boxed elevation is, in fact, a labyrinth of routes which take children to two stainless steel tubular slides both 3.25m in height. These routes have many different activities and play elements to challenge the children on their routes to the slides. A clever use of different materials and surfaces within the box also creates another element of excitement.

The sheer size and presence of the bespoke urban design inspires children of all ages to play together.

Kilburn Grange Gym, London Borough of Camden

Active

“If physical activity were a drug, we would talk about it as a miracle cure”

- **Professor Dame Sally Davies, Chief Medical Adviser to the UK government (2017)**

Physical inactivity is the fourth-largest cause of disease and disability in the UK. In 2019 the Government published a Prevention Green Paper setting out how it plans to embed the principle ‘prevention is better than cure’ across wider society. Currently, affluent people are enjoying 19 more years in good health than those who are poor. This is not okay and is not inevitable. Open spaces that are free to use and in the heart of the community can help tackle this inequality.

In addition, there is a huge amount of evidence that suggests that children who are more physically literate and have mastered their fundamental movement skills (FMS) at an early age, are more likely to continue to lead more active lifestyles. Our research with Coventry University allows us to understand FMS and make us more contentious as designers to offer a range of physical challenges that helps to improve a child’s physical literacy.

Physical activity comes in many forms and although there is a worrying trend towards gyms for children, akin to the workout stations adults are used to, we believe there are better, more playful, creative and inspiring ways to be active.

Active Inspired Designs

Jupiter Play has been designing spaces for over twenty years which has enabled us to observe how children move within them. Most children will approach a play space with high energy and often the feel of a space can be quite hectic.

The real challenge is to inspire the more reluctant children or those unable to engage in physical activity with as much rigour. Our design approach is to work with the Fundamental Movement Skill framework and create spaces that offer a breadth of active experiences that are inclusive to everyone.

Engaging young people in this project has given them the opportunity to learn new skills, network and have ownership of a community activity: inspiring them to be the next generation of community leaders.

Jayne Nendick
CEO SHoRes Centre

Withernsea - POD Squad

An interactive Sutu Sports Wall and a Sona Play Arch at the Millennium Green Play Park in Withernsea for Withernsea District Council. Not only has this equipment allowed local children to train their brains and have fun it has also helped 18 teenagers go to university, gain apprenticeships or go into fulltime employment!

Withernsea has an ageing population demographic and with this came the closure of the local community college – with the nearest college 1.5 hours away in Hull. This meant that local teenagers could struggle to get to university or gain employment after school.

The team at SHoRes (Southern Holderness Resource Centre) and their CEO Jayne Nendick raised funds to help build this playground and reengage with the younger community by providing 18 jobs on site. These teenagers joined the Park of Dreams (POD) employment squad and gained valuable work experience, after going through safeguarding training and working with Streetwise to become playground activators. Once all the training was complete, all 18 of the POD Squad entered fulltime employment, got an apprenticeship or went to university.

The incredible work SHoRes are doing is not only getting the local community more active but it is creating job opportunities, creating community ownership of their local play spaces, bringing the community together and it is also creating funds for further development of the park of dreams.

Journey from A to Play

We hope you are now inspired to join us on what we call the journey from 'A to Play'. Whether you are looking for specialist advice on any areas within our World of Innovation or looking for a full turnkey service, we have it covered.

Our full range of services are listed below, and we are happy to start your journey from A to Play either as an online conference call, site visit or CPD.

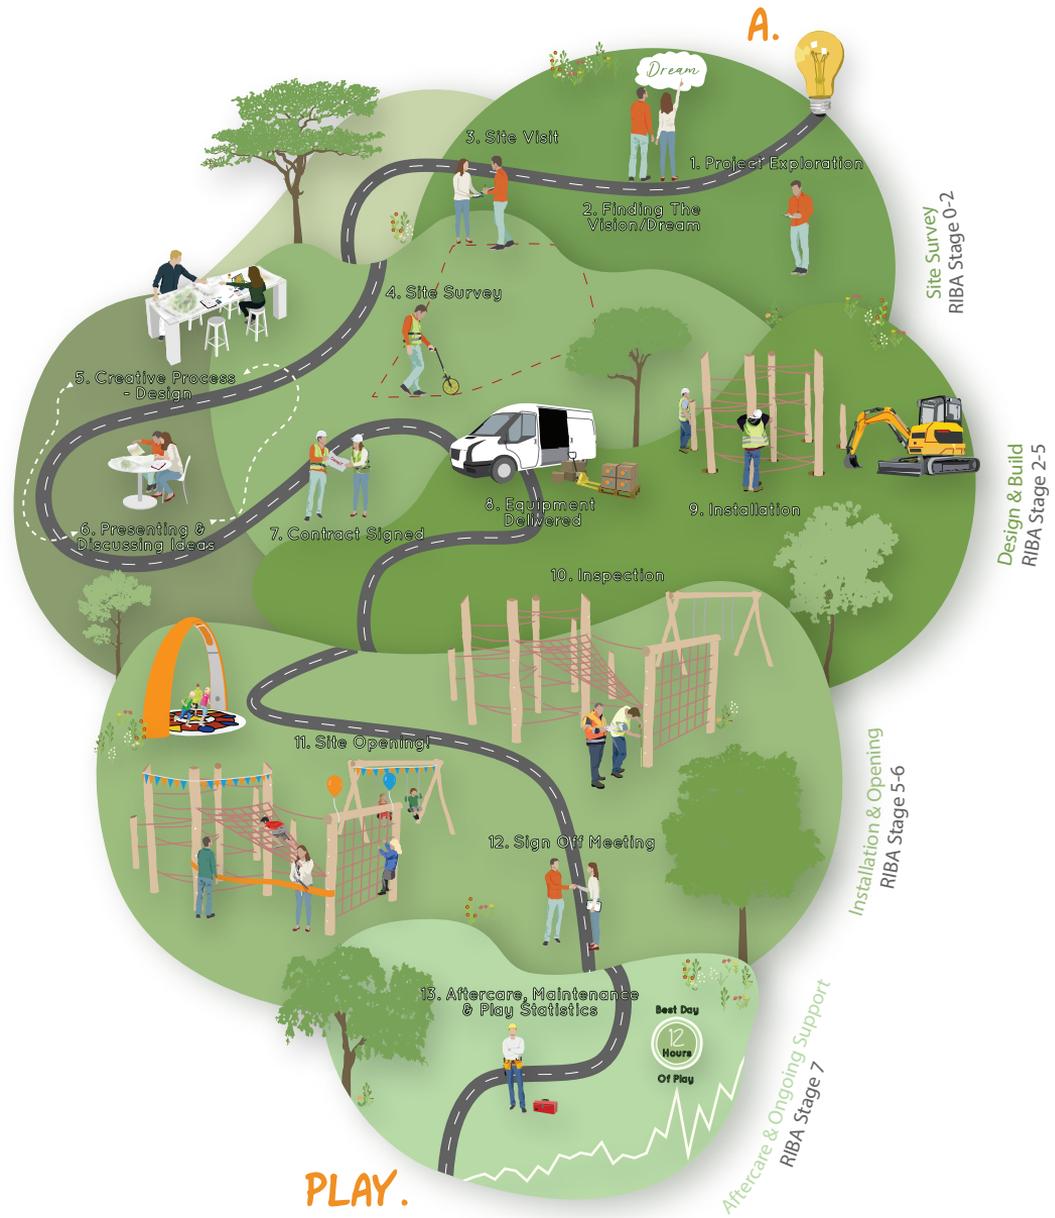

Services include:

- Full service delivery: A to Play
- Designs to all EN standards
- Concept development
- Bespoke design
- Landscape Architect design service
- Inclusion specialist advice
- Consultation and funding guidance
- Activation (with Yalp interactives)
- Design to installation
- Installation drawings
- Contract Management
- Open day events

Just get in touch at:

We look forward to working with you!

There were several reasons why Jupiter Play were chosen. These included their innovative designs of equipment and the ability to design bespoke play experiences.

The outcomes were two outstanding play facilities and Harwoods Adventurous Play Area has now been awarded a Green Flag Award. Throughout the whole process, Jupiter were excellent working with the client to produce a scheme that had a wow factor and would be destination play facilities. Maintenance has been excellent with very few repairs required over the last 18 months.

- Paul Rabbits, Head of Parks and Public Spaces & Projects, Watford Borough Council

I would say that the play area is our USP, I may be being biased but I believe we have the best free to enter playground in Nottingham. We have had a 20% uplift in visitor numbers since the playground has been installed. I can safely say this playground was totally worthwhile in terms of ROI. The playground has been so successful that the need for more phases to the space is obvious.

We have had no outgoing costs for maintenance issues. There is nothing I would change about the process and partnership we have had from Jupiter Play and I would definitely recommend them!

- Andrew Cox, General Manager, Rufford Abbey

I've been working with Jupiter Play on several projects in Essex over several years. I believe they are one of the few playground suppliers that truly understand inclusion and consider the needs of children of all abilities.

Their approach is non-tokenistic, and it is good to see how they embed the principles of PIPA in their designs. Family and young people's voices are embedded within their designs and as such children and young people fully embrace the space as their own.

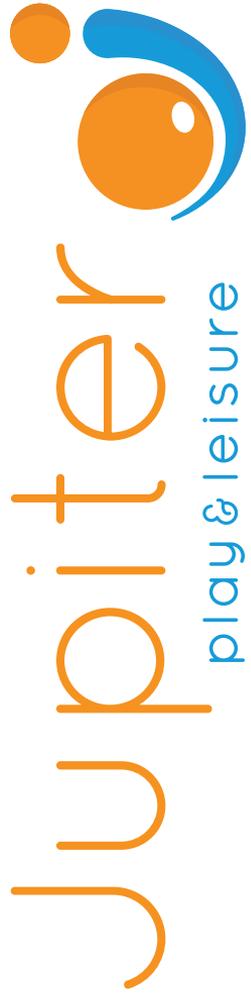

- Joanne Mason, Senior Commissioning Officer, Short Breaks for Disabled Children and Young People

We found the input on the creative side to be of the highest quality. Original and imaginative. This company also demonstrate a genuine interest in their field of work and expertise in ensuring inclusivity both in design and end delivery.

The product and materials were of a very high standard. Carefully selected and demonstrating an excellent understanding of local culture and heritage as well as being aware of local constraints. Jupiter are a company where the team at all levels – designers, directors, finance officers etc. all buy into what is being contracted and why.
